Technical data

- Cross platform framework „React Native“
- Typescript
- www.geonames.org is used for retrieving current position and querying cities and zip codes
- api.eurobilltracker.com is used for sending the bank notes
- Text recognition is done by Google ML Kit (locally on device)

Statistics – Bank notes entered

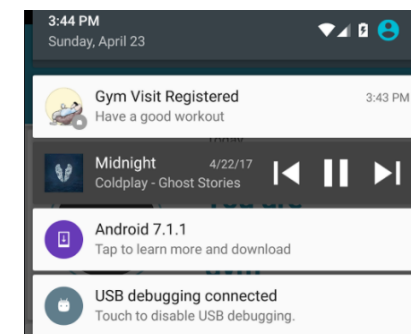

Known issues

- Text recognition of print code can be difficult because of
 - Light
 - Quality of the bank note
 - Quality of the camera
- Geographic data are not 100% correct and limited

Future

- More languages – Volunteers welcome
- Fast entry mode using camera only
- Search for postal code
- Notification for passive hits
- Switch to Google Maps
- iPhone – Volunteers welcome
